

# Ida Aukens tale ved konferencen om ballastvand

**Taler**

Ida Auker  
Miljøminister

**Dato**

8. marts 2012

**Sted**

Copenhagen Marriott Hotel

**Omstændigheder**

Deltagerene er fra en lang række interessenter, bl.a. skibsfarten (fx Mærsk), producenter af ballastvandanlæg (også danske producenter), andre danske myndigheder, NGO'er, nationale og internationale branche-organisationer, FN's Søfartsorganisation og en masse forskellige konsulenter med forstand på ballastvand. De fleste er repræsenteret på mellem-niveau, og en del er det på højere niveau.

## 1 Opening

5

Welcome to Copenhagen

10

Mr. Chairman, Ladies and gentlemen. It is a privilege for me to speak to you today about the Ballast Water Management Convention.

15

The organizers and I look forward to a fruitful discussion on the different topics that this convention covers.

20

**We are not done, but we are on the right track**

25

This is not a new concern.

30

As some of you know, the issue of invasive alien species and ballast water caught the attention of the scientific community as far back as the 1970's.

35

Greater international interest was seen in the late 1980's, where countries like Australia and Canada were facing crucial issues with invasive species.

40

In the early 90's international agreements – such as the 1992 Convention on Biological Diversity – began to regard ballast water as a threat to the conservation and sustainable use of biological diversity and marine ecosystems.

45

Similarly, the 2002 World Summit on Sustainable development called for measures to address the issue of invasive species in ballast water.

50

55

And also in the EU, the marine invasive species is treated as a subject of particular concern – for example in the EU's Marine Strategy Framework Directive, which dates back to 2008.

60

In this respect the UN Ballast Water Convention is expected to play an important role in meeting the goals set by the EU.

70

Right now the Marine Strategy Framework Directive is underway in the Member States. And it includes an obligation to establish good environmental  
75 status in all our sea areas by applying an ecosystem approach to management of human activities.

80

85

## **The Ballast Water Convention**

90

As you know, The Ballast Water Convention was adopted in 2004 – with the goal to minimize the impact from aquatic alien species and ultimately eliminate the risks to the environment and humans.

95

The Convention is one of the first international agreements to address a global sector and its impact on aquatic ecosystems – such as oceans, coastal waters and  
100 lakes and rivers.

105

With this in mind, it is no surprise that new technology and management must be developed, before the convention can function in the real world.

110

In fact, the novelty factor is the number one explanation offered, when one asks why the convention has not yet entered into force.

115

Still, more than 30 countries have ratified already. And, as soon as the ratifying countries together represent 35 percent of the world fleet, the convention can enter into force.

120

125 At the moment, less than 9 percent is needed before this target is reached.

130 That is why I am pleased to announce that Denmark will soon be able to contribute.

135

**Denmark will soon be contributing**

140

In the coming weeks, the Ministry of the Environment will initiate a public consultation of a draft ministerial regulation on ballast water.

145

Not long after this consultation, the regulation will enter into force, and Denmark will be able to ratify the Convention. A Danish ratification will  
150 contribute with 2 percent of the world fleet – and we will only be 7 percent short. We are closing in on the target.

155

Also the Danish ratification process has had to await the technical development in IMO and in the industry but now we are almost there.

160

On a more internal Danish note, we also had to ensure that the coming requirements on ballast water treatment did not collide with certain guarantees in our Constitution.

165

An issue which was only resolved recently, and which will result in Denmark  
170 ratifying with a time limited reservation for some groups of ships – giving them more time before they have to start using a ballast water treatment system.

175

180

**Invasive species – a significant challenge**

185

There is no doubt in my mind that the Ballast Water Convention is of great importance: We are facing a very real and increasing problem with invasive species.

190

In this part of the world we have – so far – only seen relatively mild damage done by invasive species. But our scientists tell me that we have coastal areas in Denmark – and in Europe – where alien species have become dominating, and that the rate of new alien species is increasing.

200

Nearly all Danes are familiar with one or more instances of new alien species, such as American clam known as “razor-shell” or “jack knife”[1] which is found in the North Sea and other areas, or the “Round Goby” fish[2] which is normally found in the Black Sea, but is now also caught on a regular basis in coastal waters in the southern part of Denmark.

210

Some species attracts special interest, such as the jellyfish known in English as the “warty comb jelly” or in Denmark under its new Danish nick-name: “the killer jellyfish”[3]. This jellyfish is now present in both the Baltic and the North Sea.

215

Now we just have to learn to live with them, because we know that in most cases it is virtually impossible to remove an invasive species, once it has

220

established itself in a new aquatic area.

225

But from now on, I hope we will not have to put up with any more of these destroying and annoying aliens in our waters.

230

And while shipping is not the only source of invasive species, it is one of the biggest. In this light, I find it very promising that shipowners will try to prevent further problems with alien species.

240

245 **Not doing anything isn't a realistic alternative**

250 I know that many of you find the convention to be both complicated and expensive.

255

However, it is not only my hope, but indeed my expectation that the remaining technical challenges will be overcome – and that the costs of complying with the requirements in the Convention will continue to be reduced in the coming years.

265 So far we have seen a positive trend with a relative fast development of new  
technologies. The last few years have seen the introduction of simpler, more  
efficient and greener solutions, which in turn cost less to acquire and operate  
than past generations of ballast water technology.

270

I don't think the alternative – doing nothing – can be considered a real  
alternative. The impact of invasive species is already considerable today, from  
275 both an environmental and a financial perspective.

280

285 **We face more than one crisis**

290 Denmark holds the Presidency of EU in these months – and one of the main  
topics right now is of course the economic crisis which is threatening the entire  
European economy.

295

This is obviously a very difficult starting point for a new Convention, but I  
think everyone can agree that the answer to the present crisis is not a business as

300 usual scenario.

305 Right now the burning platform beneath our feet urges us to find new solutions.

310 And at the same time the EU – and the rest of the world – also face other crisis: a climate and a resource crisis. To me these crises are mutually interlinked and must be solved coherently:

315

No solution without renewed economic growth and job creation!

320

No economic growth and job creation in Europe without improved competitiveness!

325

330 And no improved competitiveness without a substantial improvement in resource efficiency!

335 I believe that we have to continue the work for a sustainable development in shipping and other marine sectors, so that we can protect our seas and oceans and their biodiversity better.

340

The oceans actually provide us not only with food, but also form the basis of the livelihood of millions of people, and they provide us with genetic resources that can be used for medicine and many other things.

350

355 **Resource efficiency is one of the keys – but not the only one**

360 I generally find that improved resource efficiency is necessary to restore the European economy and to encourage the competitiveness of European businesses.

365

It will also help us ensure a sustainable management of natural resources in a broad sense and give a better protection of resources such as air, water and biodiversity.

370

However, we have to look at our resources in a broader perspective.

375

380 If we do not protect our resources from threats such as invasive species, the  
effect of an improvement in resource efficiency may end up being undermined.

385 The key to solving the problems we currently face, are therefore not just  
resource efficiency. We need to see the big picture, and ballast water  
management is part of this picture.

390

395

## **A green transformation of the economy**

400

The Danish Presidency believes that it is essential to develop a new green  
approach that can pave the way towards a resource efficient, green economy in  
405 Europe.

410 In line with the Europe 2020-strategy it is a key priority for the Danish  
Presidency to place the environmental policy at the heart of this green  
transition.

415

A policy framework is needed in order to create coherence and integration between policies that shape our economy and our lifestyle:

420

A framework that will create the playing field where innovation and resource efficiency is rewarded.

425

A framework where economic opportunities and enhanced security of supply of resources are created through smart regulation, product design, eco-innovation, sustainable management of our natural capital, increased recycling, recovery and substitution of materials and resource savings.

430

435

These areas are indeed key areas of our environmental policy.

440

445

**Is the Convention even ready for implementation?**

450

So where does this leave the Ballast Water Convention?

460 I know some of you may think that the Convention has yet to become fully  
“mature” – that it still needs to be further developed, before it can enter into  
force.

465 Nevertheless, I firmly recommend that you support its implementation and  
help find solutions for the remaining problems through relevant IMO bodies,  
back home in your individual countries, and in your strategies for your  
individual businesses.

470

I am sure we will be on the right track when the Convention enters into force.

475

480 And don't forget the important goal: to protect our biodiversity and natural  
resources, when you are struggling with the – sometimes frustrating – details in  
the Convention.

485

I know that the industry in many countries has increased the pace of  
development of new solutions in order reach the market ahead of time.

490

I know that authorities have to draw up new legislation and find new ways for  
international coordination.

And I also know that ship-owners have to invest in – and install – several  
500 thousand new Ballast Water Systems in the years to come.

505 I fully recognise all these challenges. But to me these are necessary steps to take  
to reduce the impact from shipping on the aquatic environment.

510

And I strongly support cooperation between the shipping industry, ship-  
owners and authorities – at the national, regional and global level. I am certain  
that this is the way – the only way – forward to respond to the challenges we  
face.

515

520

### **A partnership helps finding lasting solutions**

525

Shipping has always been important for Denmark. In fact, without ships our  
530 many islands would never have become one nation.

535

Today, shipping is our largest export industry and Danish shipping companies transport 10 percent of world trade.

540

With respect to the environment, most efforts in shipping so far have focused on minimizing the discharge of oil, chemicals and other pollutants into the oceans and the air above it.

545

My guess is, however, that we in the coming years will see an increased focus on the protection of the marine biodiversity itself in coastal areas, on the high seas and in the arctic.

555

In dealing with a Convention with such a complexity as the Ballast Water Convention, forming a Partnership is one way forward.

560

The Danish Partnership on Ballast Water involves numerous stakeholders from industry and government alike. It helps us find lasting solutions that will be effective in the real world.

565

Having this Partnership means that authorities, ship-owners and the shipping industry work together to find common solutions.

570

575

And the organization of this conference is just one example of this fruitful collaboration.

580

I am also pleased by the fact that the Danish Ministry of the Environment – together with the Partnership on Ballast Water – is actively supporting the development of new greener technologies in Denmark.

585

Technologies which we hope will have the potential to compete on the world market.

590

At present we support 6 different eco-innovation projects in total with 2.4 million Danish kroner – more than 320.000 Euros.

595

600

Some of these projects are Ballast Water Management Systems which are being tested at the new Danish Ballast Water Test Centre.

605

The Test Centre is established by a Danish institute of hydraulics, DHI, and is one of only 7-8 similar centres in the world. I wish you all the best of luck in those endeavours.

610

615 **Wrapping up**

620 Finally I wish you all a fruitful day here in Copenhagen. I am sure you will find  
useful information to bring back home and I hope that you will all contribute  
and find solutions to the challenges that still have to be overcome both at  
national, regional and global level.

625

In my opinion the most important challenge right now is to ensure that the  
Ballast Water Convention enters into force.

630

In many ways we face environmental crises and challenges, and I sincerely hope  
635 that you will participate in the search for solutions – greener solutions – in the  
IMO, in our region and on your ships.

640

That is the way forward as I see it. And that is a high priority for me during the  
Danish Presidency.

645

Thank you very much for your attention!
